

TMG 720

TMG 720 can be used for catalysis of polyurethane systems. The bismuth based products shows similar catalytical behavior as DBTL in certain polyurethane applications.

TMG 720 is a catalyst dissolved in a special solvent, which distributes well in the reactant and is especially suitable for polyurethane systems.

TMG 720 can be added to the reactants either as it is or blended with alcohols.

Storage

TMG 720 can be stored for at least one year if kept closed in the original packaging.

Packaging

25kg drums

Special advice for security

Information concerning:

- classification and labelling according to the regulations governing transport and hazardous chemicals
 - protective measures for storage and handling
 - safety measures in case of accident and fire
 - toxicity and ecological effects
- are given in our material safety data sheets.

Product characteristics	
Formula	Proprietary formulation
Appearance	Yellowish liquid
Bi content	19-21%
